Buffalo's TeraStation 51210's versatility proves to be an asset for SMB & SME

With fully- and partially- populated options, businesses can scale to their needs

For over a decade, CPA firms have not only seen rapid growth from their client base but also rapid growth through their client base's workload. Nowadays though streamlining efforts, every industry is asked to take on more tasks and when this happens there are more purchases, debts, receipts, refunds, and in general more data than needs to be sorted, accounted, documented, and saved. In addition to the increasing amount of data being stored and secured due to expanding businesses, ever since the implementation of the Sarbanes-Oxley Act which expanded requirements for many U.S. businesses, accounting professionals have been overwhelmed with storing and securing sensitive data to their current devices. In a rapidly growing environment such as this, it can be difficult to gauge just how much storage you will need to 2,3,4 even 10 years from now and with limited IT budget , end-users need a solution to maximize the storage they need now while also planning for the future. For these situations, the perfect solution is Buffalo's first partially populated device, the TS51210RH.

THE BUFFALO SOLUTION

Due to the Sarbanes-Oxley Act, CPA firms and in-house accounting departments are adhering to a growing number of regulations causing them to constantly be tasked with documenting, accounting, storing, and securing an ever increasing amount of transactions. There are 11 major elements in this act which increase the workload for CPA firms and accounting departments, but for example take Title IV which consists of 9 sections. It describes enhanced reporting requirements for financial transactions, including off-balance-sheet transactions, pro-forma figures and stock transactions of corporate officers. It requires internal controls for assuring the accuracy of financial reports and disclosures, and mandates both audits and reports on those controls.

With the stipulations of these report requirements constantly increasing, so does the amount of information that needs to be stored and secured and the last thing an accounting departments and then IT department would want is to play catch up by purchasing additional devices for storage and security. When this information is saved on a growing amount of devices, the consistency of growing client information can also be difficult to organize.

RESULTS AND NEXT STEPS

When implement the partially populated TS51210RH as the storage device for your CPA firm or accounting department, you are able to start at the capacity that you need now with less initial investment and then add capacity as your data grows. With the TS51210RH you are also receiving a device that uses enterprise grade hard drives, two high speed 10GbE ports as well as features all other TS5010 devices have such as NovaStor backup software, boot authentication for security, limited three-year warranty, 24/7 US-based support and more.

- Available in partially- and fully populated options
- Designed for easy installation right out of the box
- Enterprise-grade hard drives designed to withstand always-on operation
- Boot Authentication ensures the device is only accessible on authorized networks
- Business-grade processor for fast response times
- Integrated cloud backup with Dropbox, Dropbox Business and Amazon S3
- Data replication protection and encryption
- NovaStor backup software that provides server and workstation licensing
- Limited three-year warranty, additional warranty services available
- 24/7 US-based technical support
